

## CORRECTION NOTICES

Vol. 93, No. 10, October 1965:

- p. 582: The first of the expressions appearing three lines below equation (25) should be:

$$\frac{u_z}{fy}$$

Vol. 93, No. 12, December 1965:

- p. 731, col. 1, line 4: Insert "The very large value of  $C_D$  adopted in the computation of the heat flux when the stratification is unstable is not used under similar conditions in the moist general circulation experiment (second paper in this issue). In the latter study [18] the value of  $C_D$  as defined by equation (2B19) is used under all conditions."
- p. 731, col. 2, line 3: Insert "The moist convective adjustment is not performed below the lowest prognostic level; i.e., it is not performed in the logarithmic boundary layer where the wind shear is large."
- p. 737: The units of the lower half of figure 4B2 should be 10 m./sec. (dkm./sec.) instead of m./sec.
- p. 745: On the abscissa of figure 5C1, change the labels 1.3, 1.4, 1.6, 1.8, and 2.0 to 1.4, 1.6, 1.8, 2.0, and 2.2, respectively.
- p. 748: In the upper part of figure 5D5, the contour line of +.1 should be labeled +.2. Refer to figure 5D6 on page 749 for values at the level  $k=2$ , i.e., at  $P/P_*=0.074$ .
- p. 756, col. 2: Equation (7C3) should read

$$K_E = K_T - K_Z$$

where

$$K_T = \frac{1}{2} [u^2 + v^2]$$

$$K_Z = \frac{1}{2} [(\bar{u}^2)^2 + (\bar{v}^2)^2]$$

- p. 771, col. 1, line 15: To definition of  $q_e$  add "and vertical turbulent mixing."
- p. 784, col. 2, 5th line from end: Refer to equation (7B5) instead of (7B4).
- Vol. 94, No. 6, June 1966:
- p. 353: In equation (2) delete the first function on the right,  $\epsilon(\nu)$ .
- p. 364, col. 1: On the right side of the third equation, a vertical bar was omitted. The equation should read

$$\left| \int_a^b \sum \xi_i K_i(x) f(x) dx \right| = |f_M| \cdot \left| \int_a^b \sum \xi_i K_i(x) dx \right|$$

- p. 366, Section 4: In line 10 of paragraph 1, psi should be in boldface type.
- p. 373, col. 2: Sixth line from bottom should read "with Intran-1," etc.
- p. 401, col. 2: In the equation  $Y_{12}$ , north zone, the constant term should be negative ( $-2402.1$ ).
- p. 402, table 1(a): Predictors 5 and 6 under Latitude should be  $P_{62}$  and  $P_{69}$  instead of  $P_5$  and  $P_6$ . Predictors 3 and 5 under Longitude should be  $P_{75}$  and  $P_7$  instead of  $P_{10}$  and  $P_3$ .
